

Logo

Overview

The Wellcome logo is open, transparent and acts as a window into our world. It is the starting point of our visual identity and the key identifier for all our communications.

Variants

Off-black logo

The off-black Wellcome logo will be used in most instances. It can be used on light coloured backgrounds.

Off-white logo

The off-white Wellcome logo is for use on dark colour backgrounds.

Use on imagery

Our logos can be used on imagery following a few simple rules:

Choose the appropriate logo; off-black for light/bright imagery, off-white for darker imagery.

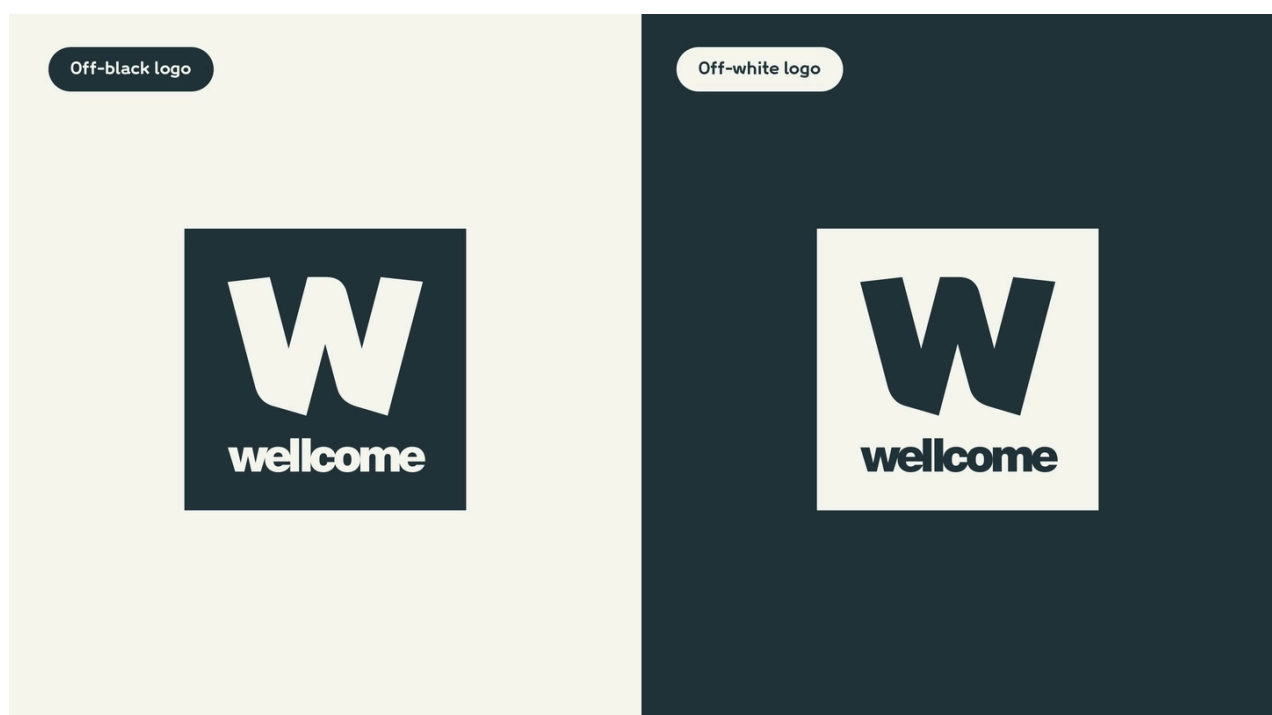

Only use on an area of the image that isn't too busy.

Ensure there is sufficient contrast.

Make sure the type within the logo is clearly legible.

NB Please ensure that you reproduce our logos from approved digital artwork only.

Please do not attempt to recreate, recolour or adapt it.

Exclusion zone and sizing

Exclusion zone

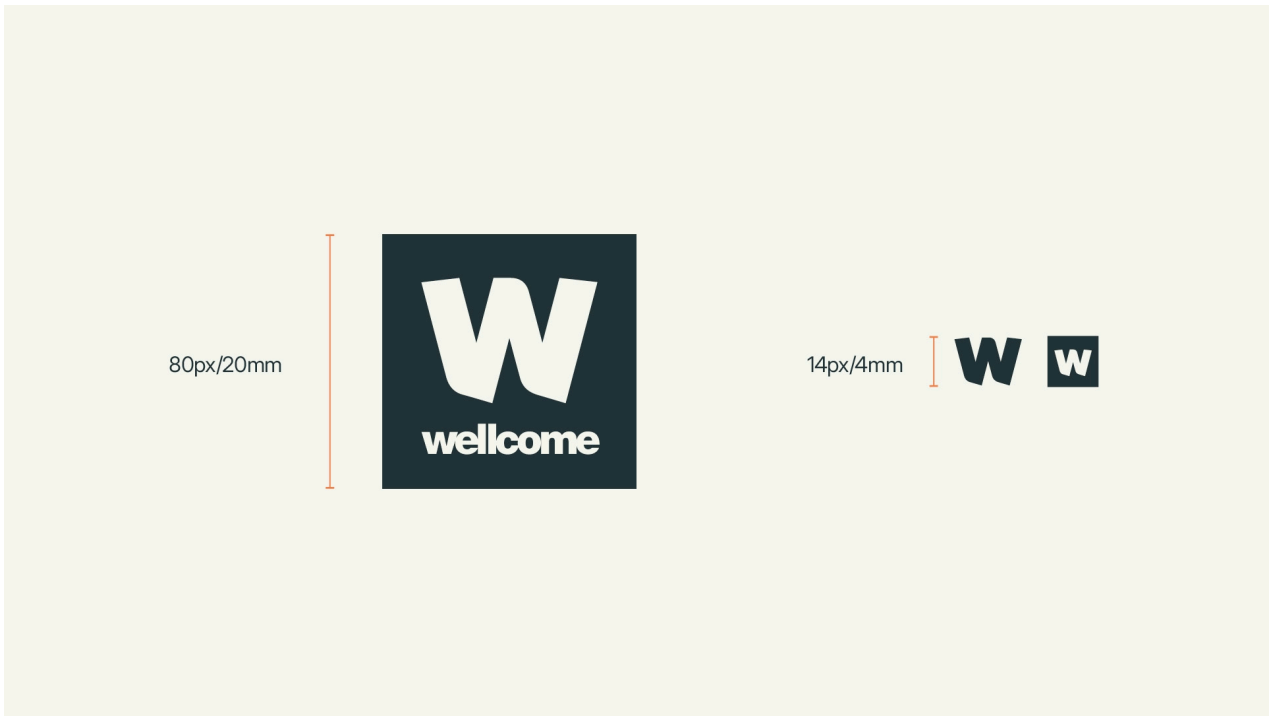

The exclusion zone for our logo is determined by the width of two 'w's from our logotype.

This is the clear space around our logo in which no other element can appear.

Minimum size

To ensure legibility, the minimum height of our logo is 80px on screen and 20mm for print. Our Avatar (a symbol only version of our logo) is available to be used in exceptional circumstances such as for social avatars and favicons. The minimum height for this is 14px for screen and 4mm for print.

Recommended sizes are as follows:

Print size	Logo width
A6	23mm
A5	30mm
A4	42mm
A3	64mm
A2+	Scale in proportion

Digital size	Logo width
Up to 799px	100px
800–1399px	120px
Over 1400px	Scale in proportion

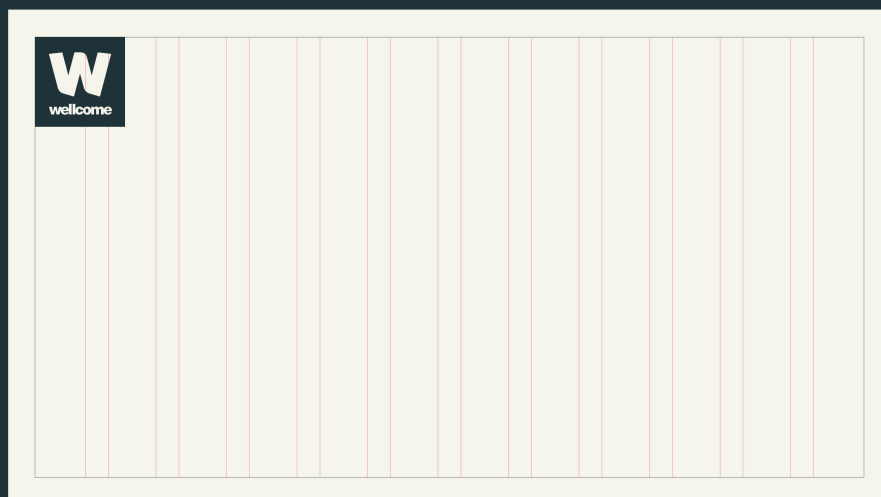

Positioning

Our logo positioning is flexible and can be placed in any corner of an application depending on the layout. This is across both print and digital applications.

Some positions may be more suited depending on the context in which it is used (for example, bottom left for social posts and top right for publication covers). The logo can be centred too (eg for end frames of videos) if it needs to be the focal point – just make sure you give it plenty of space.

Following these principles helps to make our logo visible while leaving enough space for other elements on the page.

NB The logo should sit within the page/frame and within the grid margins. This ensures clarity and consistency. See the [grids section](#) for more information. **In certain digital applications where space is tight however, such social posts and videos, the logo may be placed at the top or bottom edge of the frame without a margin.**

Placing the logo on imagery

If using our logo on an image, always ensure there is sufficient contrast. Use the Off-white logo on darker backgrounds and the Off-black version on lighter backgrounds. Avoid placing it on busy areas of the image that could affect legibility.

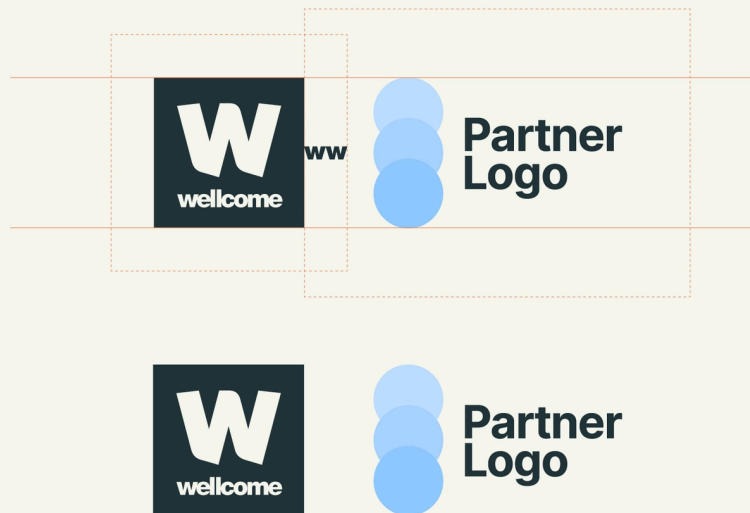

Partnerships

When using our logo alongside another, please follow these basic rules:

- Use the bigger of the two logo exclusion zones as the space in between them.
- Logos come in varying shapes, please size the logos accordingly to give equal prominence.

In our example we've matched the logo heights, but it may be that matching the width or making the text from the logos a similar size is the best way of achieving balance.

This is an example of how multiple partner logos should be positioned alongside our own.

Grant holders: 'Funded by' usage

All of our grant holders are encouraged to acknowledge Wellcome as the source of their funding in their communications. This not only gives them credibility but also boosts our profile.

Funded by

This can be displayed prominently in a corner, preferably bottom left of any grant holder publication, or be clearly displayed on grant holder's websites, linking back to Wellcome.org.

While these are examples of best practice, it is at the grant holder's discretion to display this information clearly and in a way that is sympathetic to their communications style.

Don'ts

The Wellcome logo must never be altered, modified or manipulated. Only use the logo as defined in these guidelines using the logo files provided.

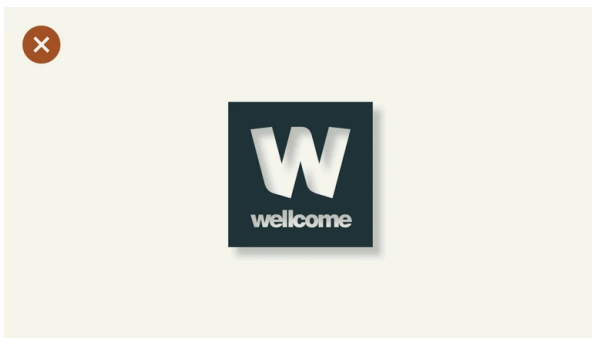

Never separate the 'W' symbol from our wordmark

Or use our symbol or word mark on their own.

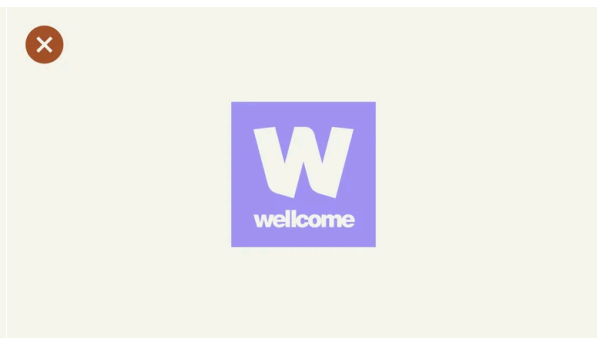

Don't adapt the logo

Never stretch, squash or alter it in any way.

Don't add effects to the logo

This includes gradients, outlines, glows and shadows.

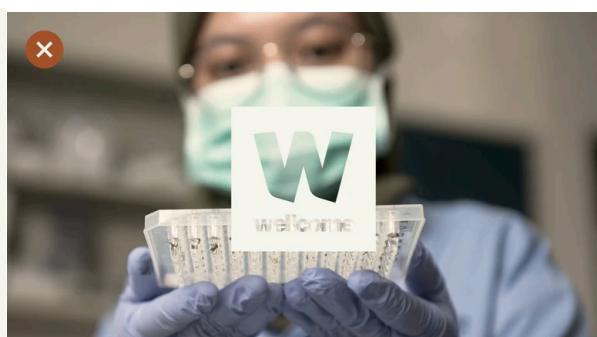

Don't change the logo colour

Only use the logo artwork files as they are provided.

Don't fill the transparent area of the logo with a colour

Only the background colour should show through.

Never sit the logo on busy areas of imagery or on backgrounds without enough contrast

Legibility is key.

Checklist

- Only use approved logo files. You can download them from above.
- Use the off-black logo unless being used on darker brand colours, in which case use the off-white version.
- Most of the time our logo goes in a corner, make sure it prominent and has enough space around it.
- To ensure legibility, the minimum height/width of our logo for print is 20mm and 80px on screen.
- If you're unsure about how big to make the logo, we have some [guide sizes](#).
